

Quartech

The QUARTECH Micro Cashier application is intended for small retail outlets with a small assortment of goods that transfers the input result on the keyboard to the payment screen. The application transfers the result of operations to the payment screen. To transfer the result of operations to the payment screen, click on "=" and then on the Sale button. If sales were made during the day and there is money earned, then at the request of the buyer, you can return money from the cashier by clicking the «Return»

When you click on the drop-down menu, the following items appear at the top right of the screen:

Settings

Filling in cashier details

The name of the service being sold, for example, “Flowers, key repair, household appliance repair, sale of vegetables, car wash”

Setting the print form of the check (you can arrange the information in any convenient form and upload the company logo).

Cash desk

Z Daily earnings report - printed at the end of the day

X shift revenue report - printed at any time

About the program

This section contains information about the version number, manufacturer, as well as the application registration form
